

Project Spotlights: IKEA

CLIENT

IKEA

LOCATION

Burbank, CA

CATEGORY

Fireproofing

ABOUT THE PROJECT

The IKEA in Burbank is the largest IKEA west of the Mississippi. Over 350,000 square feet of beams were sprayed with fireproofing at this location, but the client did not want the deck to be fireproofed.

THE SOLUTION

Other companies would have spent extra time and money to mask off the deck, but Cell-Crete decided it could be done better. Instead of masking the deck, we were able to shoot the material so tightly on the beam that masking wasn't needed, and there wasn't any overspray. This saved time and resources, since less time was spent on masking and cleanup, while more time was spent on getting the job done.
