

Project Spotlights: Precast Jointed Concrete Pavement

CATEGORY

Value Engineering

ABOUT THE PROJECT

Precast jointed concrete pavement (PJCP) systems can quickly be installed and roadway sections could immediately be reopened, minimizing disruption. However, when the old pavement sections are cut out and the new precast pavement section is installed, the precast panel section needs to match the (e) roadway. Therefore, adjustments in the field are needed to close the gap between the panel and the subgrade that needs to be filled with a non-shrink, fast-set and high-strength bedding grout.

THE SOLUTION

Cell-Crete provides a number of specialty grouts, including PJCP bedding grout. Please call us for a quote on your next project.
