

Project Spotlights: Laurel Canyon Dog Park

GENERAL CONTRACTOR

Kiewit Corporation

LOCATION

Los Angeles, CA

CATEGORY

Flowable Fills

ABOUT THE PROJECT

One foot of infill material was required to raise the elevations to provide green space in the dog park for a mixed-use development from the structure to finish elevations. Conventional flowable fill or import would cause too much load on the structure, so a lightweight material was chosen.

THE SOLUTION

Class II cellular concrete was used on this project due to its ease of placement, low density and excellent bearing capacity.
