

Project Spotlights: Mid-Coast Transit Corridor

LOCATION

San Diego, CA

COMPLETION DATE

Ongoing

CATEGORY

Precast Panels with LCC

ABOUT THE PROJECT

A double track for the Burlington Northern and Santa Fe (BNSF) Railway is being constructed at the San Diego River Bridge. The Mid-Coast Transit Corridor project is being built in two stages to keep the track operating throughout construction.

THE SOLUTION

Cellular concrete is being used to raise the track's elevation and also being added in between full-height Mechanically Stabilized Earth (MSE) panels due to the access on either side of the wall.
